Career History

ELEMENTUM **Aug 2017 - Actual**

Front End Web Developer for UI interface on Data Acquisitions Management team.

Create a React “Single Page Application” Portal for managing clients sensible (Starbucks, OSI Group, Philips, Flex) data right from scratch. The Portal enables the user to upload spreadsheet files that are uploaded to an S3 bucket from Amazon and gets processed by the back-end services. Then returns a feedback file which enables the client to have clear view of the processed results and also enables the user to see the data and the progress of the data processed. For this project I worked on the web interface, app design architecture and usability.

Used technologies:

- ReactJS
- Webpack
- Redux
- Redux-Saga
-Jest/Enzyme
-ESLint for readable code
